Before You Begin

CAUTION: Risk of personal injury or product damage. Handle with care. Vitreous china can break or chip if the product is handled carelessly.

- Carefully inspect the new toilet for damage.
- If the existing toilet does not have a supply shut-off valve below the cistern, install one before installing the new toilet.
- Install sufficient backing behind the finished wall to provide a secure material for the anchoring devices.

Installation

- 1** Remove the existing toilet: Turn off the water supply and flush the toilet, then sponge out all remaining water from the cistern. Disconnect the supply shut-off valve (if present), and remove the old pan and cistern.

CAUTION: Risk of hazardous gases. If the new toilet is not installed immediately, temporarily stuff a rag in the closet flange.

- 2** Define the position of connector: Place the connector onto the pan, position between outlet and waste pipe.

- 3** Mark the positions for the floor fixing kit holes. Use the template (if supplied).

4 Floor Fixing -2 Methods

4.1 With Brackets

Drill 10 mm fixing holes at marked location on the floor and insert the anchors. Place a washer onto each of the hexagon screws and insert them into the brackets to the floor. Position the toilet in the marked position. Install the sleeves and, using screws, fix the toilet to the brackets. Attach the cap to the screw heads.

4.2 Screw

Place the toilet into the desired position. Place the protective plastic sleeve onto the drill bit and, using the anchoring holes in the toilet as your guide, drill 8 mm fixing holes in the floor. Place the anchors into the fixing holes through the toilet. Using the screws fix the toilet to the floor. Attach the caps to the screw heads.

Rear Inlet Type

Toilet Seat Installation

1 *Install the seat as per the supplied seat instructions.*

Install the Push Buttons

1 *Disassemble the push rods.*

2 *Using the push rod, measure the distance between the flush valve and the top of the tank lid. Mark this length and cut the push rod to length.*

3 *Reassemble the push rods.*

4 *Fit the lid and test the buttons. Adjust the rods as required.*

Install Flush Valve

Flush Valve A

1 Release flush valve by turning right and pulling straight up on the canister.

2 Assemble flush valve by pushing straight down into the canister and turning left.

Flush Valve B

1 Release flush valve by squeezing the tabs on both sides of the canister and pulling straight up out of the flush valve.

2 Assemble flush valve by pressing it into the flush valve base so it snaps into place.
